

Ortho-Bionomy Cranial Course
Instructor: Marie Long

14 CMTBC CE credits for RMTs

This advanced class applies the gentle respectful approach of Ortho-Bionomy to working with the cranium. The cranial workshop explores the subtle work that enhances the balance of the cranium, the guard of the human computer. The class includes: anatomy and physiology and introduction to Dr. Paul's perspective on the energetic component to the cranium and its interrelationships to whole body systems. We will explore and observe the flexibility of the cranial bones, their relationship to each other and to the underlying membranes and structures. We will apply the Ortho-Bionomy principles and practice a subtle, hands-on approach engaging the body's inner wisdom.

Marie Long is an Advanced Instructor and Advanced Practitioner of Ortho-Bionomy, in private practice in Vernon, BC.
